

Hello!

You are known for your charity work, and it's wonderful. All kinds of modern charity on our planet Earth are local in nature, but today there are problems of a global scale such as the emissions of  $CO_2$ , heavy metals and associated global warming and rising levels of the oceans and seas with the flooding of land. There is only one way to eliminate these problems from our point of view – the creation of the fuel-free electric power industry, which over time will negate all emissions of power plants, factories, automobiles and so on. This issue is considered by our small team of enthusiasts based on Neutron Sciences - Neutron physics, Neutron chemistry, Neutron astrophysics (<http://neutronscience.com.ua/books/>). Unfortunately, there is no translation into English of the 1st volume of the "Foundations of Neutron Sciences" at the link, because a very high level scientists are required, proficient in Russian and English and with knowledge in physics, chemistry and astrophysics at the same time, since all phenomena in nature have combined character of the act and cannot be divided into physical, chemical or astrophysical phenomena.

For example, in terms of Neutron Sciences Astrophysics phenomenon of "*gravity*" in the form of wave gravitons, antipodes of electrons, which are simultaneously transformers of each other and cannot be retrieved from any natural processes and divided into the above components.

About 10 years ago the theory was developed to establish fuel-free electric power station. This was followed by experiments on obtaining of the necessary electrical effects. Next equipment, electric and electronic circuits were developed, which produced specialized electronic blocks. At this point we already collect such a power station with a power of 10 kW, consisting of two units of equipment of 5,8 kW. One block has already been assembled and tested together with electronics.

In principle, it is necessary to order the second block, to undertake final assembly and installation of all the blocks in the frame of the power station, but because of a sharp deterioration of economic conditions in Ukraine and the ongoing war we lost sources of income. And the case stopped indefinitely. In order not to lose time, we prepared to shoot a promotional video to attract investment for construction of the plant, which text you can read. Although power station is drawn, it copies the actual object that is being assembled. We need about \$ 2 million to finish all the work.

Basically they will go to export from the city of Donetsk, which was occupied by Russia, power plant developers and their families.

Intro to video

## THE PROBLEM OF THE GLOBAL ENERGY CRISIS ELIMINATED!

## ПРОБЛЕМА МИРОВОГО ЭНЕРГЕТИЧЕСКОГО КРИЗИСА ЛИКВИДИРОВАНА!

Videofilm – News №1

Видеофильм – Новость №1

The first fuel-free electric power station (FEPS) with power of 10000 W, 220V, single phase alternating current frequency of 50 Hz, which:

- does not have grounding;
- does not have engines and machinery;
- does not use high voltage (> 400V);
- does not use high-frequency current.

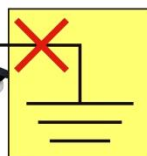

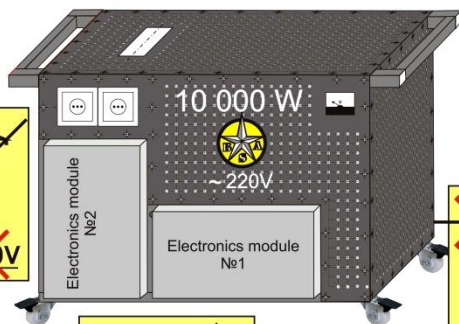

This electrical power station - it's principal decision for the new «green» fuel-free electric power industry of 7th technological way (level).

Первая бестопливная электростанция (БЭ) мощностью 10 000 W, 220V, ток переменный однофазный частотой 50Гц, которая:

- не имеет заземления;
- не имеет двигателей и механизмов;
- не использует высокое напряжение (>400V);
- не использует высокочастотный ток.

Данная электростанция – это принципиальное решение для новой «зеленой» бестопливной электроэнергетики 7-го технологического уклада (уровня).

UA

## TECHNICAL CHARACTERISTICS OF FUEL-FREE ELECTRIC POWER STATION

### FEPS-10 000W

1. Power - 10kW.
2. Alternating current, single-phase.
3. Voltage - 220V (230V, 240V-depending on the country).
4. Frequency - 50 Hz (230V, 240V-depending on the country).
5. Starter battery-18 Ah.
6. Weight without packaging ~ 65 kg (may be decreased).
7. The warranty period is 2 years (determined by electronics manufacturers).
8. Term of operation - up to 10 years (base - up to 30 years)

### Note:

Remember that you will no longer need gas, heating, electricity and hot water from outside.

### Hello, dear viewers!

A team of LLC "BSA" created the fuel-free power station on the basis of Neutron Sciences (<http://neutronscience.com.ua/books/>).

Now you see a shot of the video on fuel-free electric power station FEPS-10 000W which is produced in Ukraine. At the beginning of the shooting we will fix the fact that the power station has no hidden external connections as from city mains or from any other sources. It is easy to check, because it has no grounding, motors and mechanisms, and it is not used high voltage and high frequency current. It starts from the motorcycle battery at 18 A·h.

FEPS-10 000W is a founder of 7th technological way that defines a new era of fuel-free "green" electric power industry. This device is the most high-tech product of modern time when compared with products of military-industrial complexes and spacecraft, as its principle of work cannot be defined from the perspective of modern science. The boundary between old and new fundamental sciences is located between 6-th and 7-th technological ways.

The core of the 7th technological way are:

1. New fundamental sciences: Neutron Physics, Neutron Chemistry and Neutron Astrophysics.
2. Large fuel-free static energy (**LFSE**), the current is alternating.
3. Small fuel-free battery energy (**SFBE**), current is direct.
4. Electric vehicles of all kinds on fuel-free electric power plants.
5. Personal electrification of machine and other production equipment.
6. Anti-gravity aircraft (**AGA**).
7. Space exploration at the **AGA** without using fuel.
8. ... and other devices and materials for human life and activities.

This video is intended to attract investors wishing to participate in the design and construction of plant for the production of this station and its modifications with capacity up to 1 million pieces per year in one shift. The required investment amount is \$ 1.5-2 bn. USA.

We would like to draw the attention of manufacturers of cars, boats, yachts that we are prepared, taking into account their requirements to develop a power station up to 150 000W (150kW) and build a joint plant in parallel with the first. It is also planned to build a plant for the production of fuel-free battery electric stations such as lithium-ion batteries, only without the recharges within 15-20 years with 100% continuous load.

We will be grateful for the help.

Perhaps you will have questions to us, we will answer them.

Bye!

V.F. Andrus
