

**Dear sirs! Organize your  
PERSONAL EL DORADO!**

Today, the world "suffocates" from the lack of clean electricity. Great efforts are being made to create and distribute of alternative renewable energy sources, but none of them can is able to maintain of a constant electric capacity during the days, months, or years. The team of BSA Ltd managed to solve this problem by developing an electric reactor based on a chain reaction with capacity up to 1200 MW for replacement of nuclear reactors, steam boilers at thermal power plants (TPP) and city boiler houses, and a fuel-free electric power station 10 kW for domestic needs. Everyone who first face this problem, in one voice, argues that this is impossible. I will open the secret, all technologies in new developments have long been known – these are the so-called developments for a new application of known technologies. For example, we need to clean fish from scales, and we know lot of ways and technologies for this. If you ask whether it is possible to wash away the fish scales using water, then everyone will laugh. Now let's remember the washing of your cars with high-pressure water and apply such jets to the fish from both sides in a closed box for a short time, and at the output you will get a clean shiny fish. This is development for a application of the known method of wash of cars for removing fish scales.

**The nuclear reactor** is a pot of water in which fuel elements - heaters with nuclear fuel - are installed, and this technology is known all over the world.

**The electric reactor based on a chain reaction** is also a pot of water, into which fuel elements (heaters with electric multipliers) are installed – this technology is also known around the world. Simply, as with cleaning fish from scales with the help of water, no one has yet guessed to use it for the indicated purposes, namely to replace nuclear reactors and steam boilers.

The electric power station for domestic needs of 10 kW is also developed on a known 150-year-old experience, described in all physics textbooks. Everything is tried out and tested, but in any case – it is higher technology than existing ones, and it is necessary to produce a certain number of new components in order to assemble reliable commercial products ready for mass production.

**INVESTMENT RISKS EQUAL ZERO!**

You have invested	You will receive in three years
\$1 000 000	\$3 375 000
\$10 000 000	\$33 750 000
И т.д.	

It is like a bank deposit at 50% per annum. The size of the invested funds can be anything.

Hurry up! We need only a certain amount and we do not plan to collect excessive debts.
